

ketamine is a medication primarily used for induction and maintenance of anesthesia. It induces dissociative anesthesia, a trance-like state providing pain relief, sedation, and amnesia. Wikipedia

Formula: C<sub>13</sub>H<sub>16</sub>ClNO

Molar mass: 237.725 g/mol

Other names: CI-581; CL-369; CM-52372-2

Sold as a grainy white or light brown powder. Looks similar to cocaine but is a very different drug.

Also called:

Donkey Dust

Green

K

Ket

Special K

Super K

Vitamin K

Wonk

ketamine is used in medicine as an anesthetic for humans and animals.

By snorting it as a powder

Most people who take powder ketamine will snort it. Users often talk of taking a 'bump', meaning they snort a small amount of ketamine. In the UK, snorting is the most common way to take ketamine.

By injecting it

People who regularly use ketamine sometimes inject it to get a bigger hit. They usually inject ketamine into a muscle.

By swallowing it as a tablet

Some people swallow it in tablet form, but this is less common.

By bombing

Some people 'bomb' it, which is swallowing the powder wrapped in a cigarette paper.
