What is Kota Stone?

Kota Stone It is an easily available fine-grained limestone variety that originates in Kota, Rajasthan. Its appealing natural appearance and durability, as well as its low price makes it the most frequently used stone in the exteriors and interiors of commercial and residential buildings. Kota stone is well-known for its attractive appearance and appealing colors and is a beautiful aging material with time. It is available in various sizes and shapes, and will easily be incorporated into any design. Actually, the material can be a huge advantage in the construction industry because of the distinct features it has.

7 Benefits of Kota Stone Flooring

Kota stone comes in appealing and natural shades. It is polished to a high-gloss finish or left rough and is water-resistant, non-slippery and non-porous. The sedimentary rock is extremely hard and compact. It is also uniform across the entire cross-section since it is made from fine-grained limestone. Beyond that the numerous benefits that this rock has to offer. Check out the benefits in the following paragraphs.

1. Durable

Kota stone is a durable flooring material due to its non-porous and temperature-resistant properties. Because of its strength, Kota stone flooring is perfect for both indoor and outdoor usage. If you're looking for an attractive surface then you should think about polishing Kota stone. Kota stone.

2. Heat Resistant

The beauty is made up of Kota stones makes them a great option for walkways, driveways or balconies as well as other areas outside. You may not see the same property in other naturally-colored stones and yet, when you have installed Kota stone on your floors you'll be able to enjoy a relaxing stroll.

3. Versatile

Kota stone is available in different shades, sizes, shapes and finishes. This allows you to mix and match various Kota stone flooring styles. You can also find various sizes of Kota stone, making it suitable for any size of floor.

Because of its availability in polished and rough finish, Kota Stone can be employed in many different design contexts. It is popular in areas that see a lot of traffic from feet due to its toughness and durability. The rough Kota stone flooring designs are commonly used in outdoor areas like patios, stairways and walkways, as well as pavements, driveways, and so on. Polished stone is commonly used within buildings since the natural color and sparkle of the stone add beautiful appeal to any room. They are utilized in wall coverings and kitchen flooring, bathrooms, and kitchen.

4. Easy Maintenance

Kota Stone flooring can be easy to keep clean and maintain. It's all you need to do is clean the flooring with a moist cloth each day and every month using soapy water. The flooring made of stone is too durable to need frequent maintenance, which means that you don't need to do a lot to ensure it lasts for long.

5. Cost-effective

Kota stones are less expensive than marble and granite floors. This is what makes Kota stone flooring a favorite choice for homeowners who are looking for an affordable but long-lasting flooring option.

6. Non-porous and Slip Resistant

They are great for areas with high humidity since they don't absorb water or moisture and can be used both indoors and out. They are non-slip, which makes the perfect choice for balconies, kitchens bathroom, as well as other spaces where there could be lots of water as well as a lot of foot-traffic expected.

7. Environmentally Friendly

Kota Stone flooring composed from natural materials such as clay minerals, sand along with stone quarry dust. This makes it environmentally-friendly. All of these are earth-based natural resources that have been mined. In comparison to other flooring materials such as wood and tile, Kota stone is an ecologically friendly flooring solution.

Price of Kota Stone

One of the main reasons Kota Stone is the most sought-after stone in the construction industry is the low cost. Although it is a unique stone it is affordable and doesn't cost much more than natural stones such as marble and granite. The price of the stone is dependent on the thickness and size that the stone. Additionally, the price is dependent on what the stones' quality is.

The price for Kota Stone starts as low as Rs.10 square feet, and can go up to Rs.50 sq. feet. If you're buying large quantities, then the best option is to purchase it from the place where it was quarried since the cost is lower. If the purchase is not significant the local store is the best choice.
