ConstructMonitor is a software solution developed by Neilsoft. Neilsoft, founded in 1993 and based in Pune, India, is a global Engineering Services & Software Solutions firm.

ConstructMonitor – a SaaS Solution for Automated Quality Inspection during the Construction Phase helps remotely monitor design deviations at the construction site (vis-à-vis Design BIM models) with LiDAR-enabled iPhones and terrestrial 3D laser scanners. Our passion lies in transforming construction project management. With a dedicated team of seasoned professionals and advanced technology, we aim to empower construction experts with efficient tools and actionable insights, ensuring project success.

The solution offers customizable visualization capabilities and intuitive dashboards providing a comprehensive view of the construction project. It empowers remote users to determine the 'as-built' accuracy of the under-construction building.
