

# Mill Roll Welding Wire

**Address** Quancheng Road, Yongchang Street, Chengwu County, Heze City, Shandong Province

**Contact Person** Iase

**Mobile Number**

**Email** giovannispinosocu@gmail.com

## Introduction of Hardfacing Wire:

Rolls are important parts of rolling mills in steel rolling mills. As an important production component in the steel industry, they have the characteristics of large consumption and high cost. Rolls have complex working conditions and are easily damaged. For failed rolls caused by damage, surfacing welding can be used method to repair it and extend its service life. Our Hardfacing Wire is designed to perform surfacing repair technology on rolls, which can perfectly solve the above situation. Using Wear resistant welding wire for surfacing can reduce factory expenditure costs and extend the service life of equipment.
