HUACHEN Screw Barrel Factory, a professional manufacturer of screws and barrels for plastics in China.

At present, the screw market is highly competitive, the price and cost tend to be transparent, the low price competition is serious, profits are declining, while the high cost of labour, resulting in business difficulties. (hereinafter referred to as "HUACHEN Screw & Barrel") has always adhered to a principle at the bottom of its heart.

HUACHEN screw barrel consistent goal is: good set of twin screw barrel, selection of materials, workmanship and worker quality are very important, hardware and software facilities to keep up.

HUACHEN Screw Barrel Factory has been producing screws since 1998. The characteristics of HUACHEN Screw Barrel Factory are mainly wear resistance, stable quality and high output. HUACHEN Screw has always attached importance to the research and development of new products and materials, and now there are several new products that have just been developed. Up to now, HUACHEN Screw has developed more than 20 patented products and 2 patented invention products. In particular, we have always developed conical twin-screw barrels. On the other hand, HUACHEN Screw is making great efforts to develop the market, but has been experiencing the helplessness of being imitated by others.

It is still quite easy for our competitors of similar products to achieve only a few similarities in appearance, but the similarity in appearance of conical twin-screw barrels is enough to mislead many new customers. That's why HUACHEN Screw has been constantly developing new products over the past few years, hoping to always reside in the development of its own products, rather than resigning itself to imitation.

So, how can HUACHEN Screw Company always be as stable as ever in making a variety of quality fine screw barrels. We can start with some introduction in terms of material and quality of personnel. First of all, the material side is in our own hands. We are less likely to buy raw materials from distributors. Instead, we order directly from the steel mill in full accordance with our own parameters and elemental demand criteria, thus ensuring the stability of the quality of raw materials for barrel screw processing.

And we test the quality of every batch of steel we buy. This equipment is imported from Germany and the practical tests have proved to be very effective.

Therefore, in order to guarantee the quality of the product, we must first start from the source of raw materials, and then rely on management and continuous improvement of the process, otherwise the process can not guarantee the quality of the final product. But as competition in the industry continues to intensify, we also need to continue to improve and push the boundaries of innovation.

HUACHEN Screw Company also uses some imported materials for the production of twin screw barrel. However, the choice is mainly based on the actual production needs of the customer. Imported steel has better performance, but is also relatively expensive. Therefore we take into account the actual needs of our customers and do not purposely promote imported steel. The price is too high and some customers may not be able to accept it. Besides, there is a wide range of screw barrel materials on the market now, giving us a wide choice.

What is involved after that is the process processing equipment. HUACHEN screw company believes that without good equipment, can not do a good product. HUACHEN has always focused on the upgrade and production of screw barrel processing equipment. However, HUACHEN also notes that even if the equipment is good, it is important to consider the actual use requirements from the screw barrel to choose the right processing equipment. For example, to do injection moulding machine screws require higher precision, it is necessary to use higher-end equipment, but extruder screws require relatively low precision, there is no need to force the use of high-end equipment. So, there is a lot to learn about proportionality.

HUACHEN's talented team is the software factor. We currently have more than 200 people and a research and development team of 10. HUACHEN screw company has been serving the user market, and communication with customers is also more in-depth, more understanding of the actual needs of customers. HUACHEN Screw's optimised research and development is also incubated and grown in this environment.

R & D does not mean that a new product can be developed and sold directly to customers, but must know in advance where the needs of customers are. In general, HUACHEN is still ahead of many of its peers in terms of product development. The customers of HUACHEN Screw Barrel Factory also prefer to develop new products. Because the plastics market is rapidly changing, the profit margin is relatively low if you keep doing traditional products.
