Speedgatz was established in 2019. Swing flap barriers are an important security measure in many settings, from airports to office buildings. They help to control the flow of people in and out of an area, and can be set to allow only authorized personnel through. It is made up of a series of swinging flaps that are mounted on a frame. When the barrier is in use, the flaps swing back and forth, making it difficult for people to pass through. In the event of an emergency, swing flap barriers can also be used to seal off an area and prevent unauthorized entry. To know more visit
