RFID jewellery tags have the following advantages over traditional jewellery tags such as barcode tags:

Support multi-tag reading: This will substantially increase the jewellery inventory's efficiency.

Barcode tags have numerous limits and are easy to wear, whereas RFID Jewelry tags rely on built-in chips, may be any size or shape, and have a lengthy data storage duration of up to 10 years. They can work even if the surface is worn.

Long Reading Range: **IRYS RFID jewellery tags** have a reading range of up to 10 metres, making them ideal for counting over a large area.

Jewelry management has been transformed by RFID technology, which has made it more sophisticated and convenient. Although RFID jewellery tags are more expensive than traditional tags, they are more cost-effective over time.
