ConstructMonitor is a software solution developed by Neilsoft. Neilsoft, founded in 1993 and based in Pune, India, is a global Engineering Services & Software Solutions firm.

ConstructMonitor – a SaaS Solution for Automated Quality Inspection during the Construction Phase helps remotely monitor design deviations at the construction site (vis-à-vis Design BIM models) with LiDAR-enabled iPhones and terrestrial 3D laser scanners. Our passion lies in transforming construction project management. With a dedicated team of seasoned professionals and cutting-edge technology, we aim to empower construction experts with efficient tools and actionable insights, ensuring project success.

The solution offers customizable visualization capabilities and intuitive dashboards providing a comprehensive view of the construction project. It empowers remote users to determine the 'as-built' accuracy of the under-construction building.
