## Automatically scan your website for malware and protect online reputation

Protects your website to give you peace of mind. SiteLock's Daily Malware Scanning identifies vulnerabilities and known malicious code and automatically removes it from your website to protect your website and visitors against threats. Plus you get the SiteLock Trust Seal which builds customer confidence and is proven to increase sales and conversion rates.

A **website vulnerability** is a weakness or misconfiguration in a website or web application code that allows an attacker to gain some level of control of the site, and possibly the hosting server. Most vulnerabilities are exploited through automated means, such as vulnerability scanners and botnets.

**Malware**, short for malicious software, is used to gather sensitive data, gain unauthorized access to websites and even hijack computers.

### Malware Scan

Proactively monitors for and alerts you about any malware that is detected on your website.

### Automatic malware removal

If a scan finds anything, SiteLock will safely remove any known malware automatically.

### Vulnerability Scan

Automatically checks your applications to ensure they're up-to-date and secured against known

---

vulnerabilities.

### **OWASP Protection**

Get protection against the top 10 web app security flaws as recognised by OWASP, the Open Web Application Security Project.

### **SiteLock™ Trust Seal**

Give your visitors added confidence by showing your website is protected by SiteLock.

### **Firewall**

The TrueShield™ Web Application Firewall protects your website against hackers and attacks.

### **Protect your reputation**

Daily scans help detect malware early before search engines have a chance to find it and blacklist your site.

### **Fast automated setup**

Instant and fully automated setup gives you protection immediately without anything to install.

### **Content Delivery Network (CDN)**

Speed up your website by distributing it globally and serving it to your visitors from the closest location for faster page load speeds wherever they are.

We perform a comprehensive website scan that encompasses:

- **File-based Malware Scanning and Removal:** SiteLock performs daily scans of a website's files for malware. If malware is found, the website owner is alerted immediately. SiteLock also offers comprehensive scans to automatically remove the malware.
-

- **Vulnerability Scanning:** SiteLock performs scans of website applications for common vulnerabilities that could lead to a compromise.
- **Application Security and Vulnerability Patching:** SiteLock has the technology to automatically patch vulnerabilities in content management systems (CMS).
